## THE GRAPHOMETRIC SIGNATURE

### iStrumentum

iStrumentum is software designed and developed by Notartel in collaboration with Aruba and the Information Technology Sector of CNN that allows for the signing of a digital document (public deed or authenticated private deed) with absolute safety and simplicity. iStrumentum covers the entire process of preparation, creation, verification and finalisation of a computerised notarial deed and its annexes, for the signing of which the parties can use either a digital signature (for those who have one) and/or a graphometric signature.

The iStrumentum software was designed and implemented in compliance with the Digital Administration Code and the notarial law and can be integrated with the functionality of business applications for notarial offices created by commercial software houses. iStrumentum, once installed, interfaces with the National Council's CA of Service and the time stamp system.

Società informatica  
del **notariato italiano**

**notartel**

The signing of a computerised deed uses a graphometric device (pad) connected to a computer. The signature on the device is immediately processed by iStrumentum and incorporated into the deed.

At the end of the process iStrumentum creates a single file with the .ati extension which includes the digital or graphometric signatures of the parties and the digital signatures of the notary affixed to the various documents that make up the computerised deed. The file thus produced is ready to be sent to the regulated archival system Notartel has provided for the National Council.

### **iStrumentumWeb**

The software is also available in web version, without the need to be installed or updated on different PCs. This version of iStrumentum allows the Notary to stipulate outside the firm without any restrictions other than having an internet connection, a smartcard reader and a graphometric tablet.

### **iStrumentumVOL**

It is the online verifier of the IT deed in .ati format, the web application for checking a notarial IT deed and its annexes signed with digital signature and / or graphometric signature.

By connecting to iSVOL through the Digital Signature website of the Italian Notaries, you can check .ati files, whether they are public documents or private records, without the need to install software and without transferring documents to the remote server.

Società informatica  
del notariato italiano

notartel

Founded in 1997, Notartel is a company owned by the National Council of Notaries and the Cassa Nazionale. We implement and manage computerised and online services for Italian notaries. We connect all Italian notarial offices through the Unified Notarial Network (R.U.N.), a private web platform created by the Notariat at its own expense that provides services for communications with the public service and thus indirectly with the public. Our task is to implement the policies set out by the IT Sector of the National Council. Our operational aim is to integrate the internal services within the notary's office, created in-house or by third parties, with those of the Public Administration and private parties using a single Notarial computer system. Since 2002 we have managed the issuing of digital signatures and smart cards as well as certified electronic mail for Italian notaries on behalf of the National Council of Notaries. We have been certified ISO 27001: 2013, ISO 9001: 2000 and Regulation EU No 910/2014 (eIDAS). We are registered in the list of accredited AgID Conservators and in the Register of online sale Managers by Ministry of Justice.
